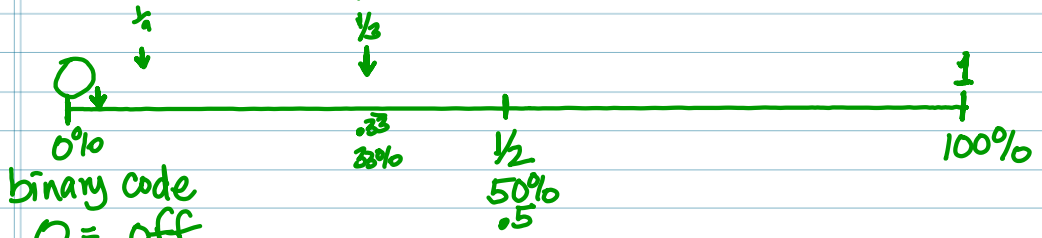
5/2 Probability

probability - the liklihood of an event occurring.
Expressed from 0 — 1.



binary code
0 = off
1 = on

probability
0 = no = 0% (impossible)
1 = yes = 100% (certain)

The space between 0 → 1 on "one" hand doesn't seem too large, but on the other hand, it's "everything!"

outcomes - favorable
outcomes - not favorable

die $\frac{1}{5}$ favorable
not favorable

% probability

$\frac{\text{favorable}}{\text{all outcomes}}$

ODDS = the outcome of what I want : what I don't want

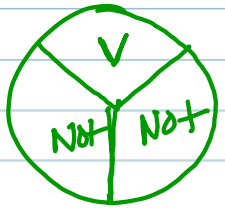
ODDS = the outcome of what I want : what I don't want

3 sect. spinner ~

Odds = 1:2

F	U	U



prob = 1 out of 3

1/3 33%

Flip a coin ~

odds = 1:1 (even)

prob = 1 out of 2 = 50%

CONTIG, Jr

- each player rolls 3 dice
- use all 3 numbers with operations ⊕⊖
- make a total to match a number on board → score 1 point
- make your number "touch" the other's number, score additional point.
