

10/22

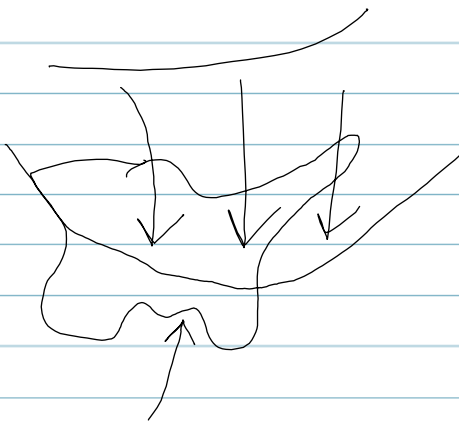

weather - sky conditions, temp (right now)
precip

climate - average of weather over time
comes from troposphere / winds-global
ocean currents

latitude lines
global winds
ocean currents

active
weather

Bill Nye

- equator is warmest because of most direct light
- poles coldest (least direct)
- tundra - is a desert even though cold
- tropical rain forest has most diff species
- grasslands savanna
- desert (low precip)
- temperate forest (deciduous trees)
- taiga

Weather Tools

thermometer - measures temp

barometer - measures air pressure

psychrometer - measures humidity

anemometer - wind speed measure

hygrometer - measures humidity

wind vane - measures wind direction

rain gauge - measure precip (amount)
