

3/8

ENERGY

① Renewable + Non-renewable

② Responsible Use of energy? Why?

If you use energy responsibly then there would be less waste. This is important because there more people so less energy would be less waste.

③ Different Sources of Energy in world:

	<u>Pro</u>	<u>Con</u>
- Solar		
- Oil (fossil fuel)		
- sun	main source of energy	non-renewable hard to make
- coal	electricity / generator	hard to get, carbon
- wind	renewable	
- wood	renewable	can't use too much
- hydro	healthy for environment	can't generate much energy
- geo thermal	great for environment	limited
- nuclear	no electricity	generates waste
- fossil fuels	generates energy	not renewable and makes pollution
- water	renewable	water goes through purification which uses fossil fuels.

ENERGY

① Renewable + Non-renewable

② Responsible Use of energy? Why?

If you use energy responsible then there would be less waste. This is important because there more people so less energy would be less waste.

③ Different Sources of Energy in world:

pro

con

- Solar

- Oil (fossil fuel)

- sun

pro
main source of energy

cons

~~non-renewable~~ hard to make

- coal

electricity /
generator

hard to get, carbon

- wind

renewable

- wood

renewable

can't use too much
renewable

- hydro

healthy for environment

can't generate much
energy

- geo thermal

great for environment

limited

- nuclear

no electricity

generates waste

- fossil fuels

generates energy

not renewable and makes
pollution

- water

renewable

water goes through
purification which
uses fossil fuels.
